

**Amendments to the Specification:**

Page 15, third paragraph, please replace with the following:

The data thus transferred is distributed to each line of Y-line by a shift ~~register~~ register, and is inputted to FIFO, where the data precedently inputted is transmitted ahead in turn, and is sent to a LCD driver in just the same way when a gelidium jelly is pushed out one after another, and is thus outputted to each Y-line. This is illustrated in Fig.18. The velocity is not constant. Referring to Fig.18, after the data of #0 bit is pushed out, the data of #7 bit is pushed out, and after a while, the data of #1 bit is pushed out. This is illustrated in Fig.19.
